C4 or higher category of corrosiveness, on request

Ral or any other colour system can be supplied

special paint development for insulated profiles with AkzoNobel Interpon

Category of corrosiveness	Outdoor	Indoor
C1 Very Low		Buildings that are heated by their own internal atmosphere, for example; offices, shops, schools, hotels.
C2 Low	Atmospheres with a low pollution level. Mainly rural areas.	Non-heated buildings that have a risk of condensation, for example; warehouses or sports halls.
C3 Average	Urban and industrial atmospheres, moderate pollution from sulphur dioxide. Coastal areas with low salinity.	Production shops with a high content of humidity and low air pollution, such as foodstuffs industries, laundries, breweries or dairies.
C4 High	Industrial and coastal zones with moderate salinity.	Chemical works, swimming pools and maritime/naval yards.
C5-I (Industry) Very high	Industrial zones with a high humidity level and an aggressive atmosphere.	Any buildings or zones with continuous condensation and high pollution.
C5-M (Marine) Very High	Coastal and maritime zones with high salinity.	Any buildings or zones with continuous condensation and high pollution.
